ABSTRACT OF THE DISCLOSUKE

The invention relates to aA method of driving an LCD is presented. comprising The method includes providing an array of pixels. characterised by the steps of providing cholesteric Cholesteric liquid crystals arranged between spaced transparent substrates, and by providing a reset pulse and a plurality of many selection pulses are also provided, resulting in whereby to provide resultant driving waveform(s).

Thus the driving schemes or methods shown consist of a reset phase and a selection phase, the pulses of the latter being equipped with freedom in the multiplicity of the selection pulses. These schemes provide gray sale capability and improved optional performance. Inversions of waveform are used.
